**Subject:** Number of Coronavirus Deaths per Week - CDC, Worldometers and now HealthData Plots.

It is interesting to examine graphical plots of various aspects of the coronavirus (also known as the Wuhan virus) and relate them to the hysteria from left wing **news** [term used with a grain of salt] organizations.

A third website for obtaining useful (?) data regarding coronavirus is:

<https://covid19.healthdata.org/united-states-of-america>

This website provides graphical depictions of various aspects of the coronavirus and breaks it down by country and state. Predictions have been notoriously all over the map. One such graph is “US Deaths”. Data is available by running the cursor through the graph and write down results. In order to compare this data against the CDC and Worldometers data, I grabbed simply the number of deaths on a particular day corresponding with the data points and week dates on the previous graph.

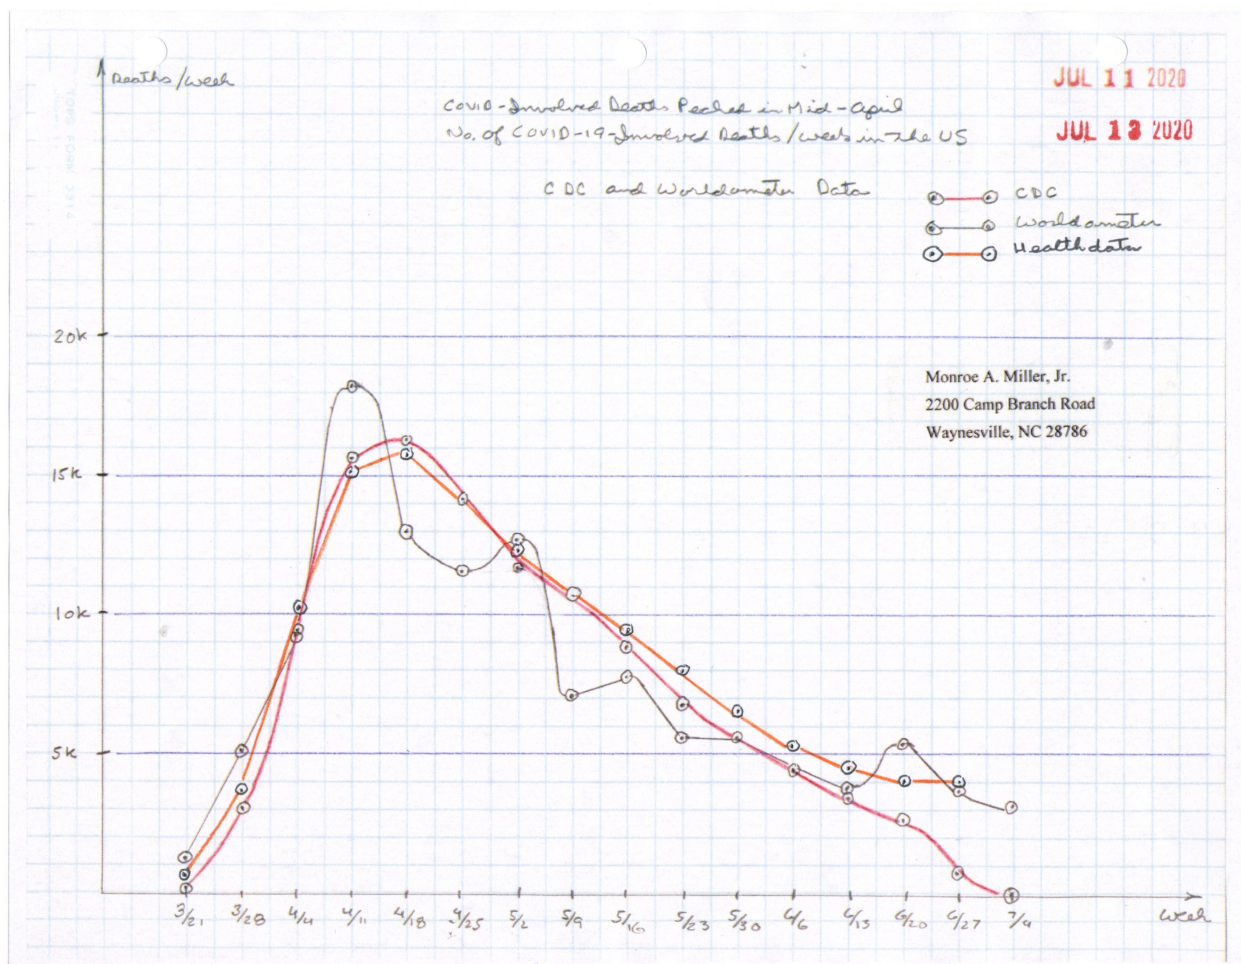

<https://www.haywoodtp.net/pubII/200711CoronavirusDeathsPerWeekPlots.pdf>

**[Editors Note: THIS IS NOT AN AVERAGED DATA SET, ONLY ONE DATA POINT EVERY SEVEN DAYS.]**

I took the previous graph dated 7/11/2020, made a copy, and plotted HealthData.org superimposed over the CDC and Worldometers data. The following table shows the raw data from the three, followed by a graph of the three sets of data.

Date	CDC - Worldometer	US Deaths / week	JUL 11 2020
	CDC/week	Worldometer	Health Data.ORG (Daily) x7
3/21	555	12,51	92.16 x7 = 645
3/28	3,061	5,099	523.89 x7 = 3,667
4/4	9,530	9,291	1,452.38 x7 = 10,166
4/11	15,734	18,397	2,156.41 x7 = 15,094
4/18	16,394	13,068	2,260.46 x7 = 15,823
4/25	14,168	11,654	2,055.76 x7 = 14,390
5/2	11,753	12,795	1,790.94 x7 = 12,536
5/9	10,857	6,999	1,551.04 x7 = 10,857
5/16	8,889	7,855	1,337.04 x7 = 9,359
5/23	6,863	5,681	1,135.48 x7 = 7,948
5/30	5,758	5,660	946.78 x7 = 6,627
6/6	4,443	4,670	782.64 x7 = 5,478
6/13	3,433	3,857	656.81 x7 = 4,597
6/20	2,287	5,378	583.14 x7 = 4,081
6/27	743	3,854	574.27 x7 = 4,019
7/4	177	3,258	
7/11			
7/18			
7/25

Well, this is interesting.

The HealthData.org data is in orange. Well what do you know?

- Healthdata.org also generally coincides with the CDC and Worldometers data.
- There is a slight divergence of the three beginning around 6/20/2020.
- There is still no indication of an increase in the rate of deaths.

Previous Observations:

- The Worldometers data generally correlates with the CDC data!
- (Not shown) The total number of deaths by both organizations is fairly close.
- Except for some bumps and wiggles, the Worldometers data indicates a general decline in the death rate since mid-April.
- The last three weeks has Worldometers data slightly higher than CDC's.

There appears to be little correlation between Number of Cases (increasing) [and corresponding Left Wing media hysteria] and the Death Rate (decreasing).
